

Product Name :

Demonstration Francis Turbine

Product Code :

SLE/MCE/44

Description :

Description:

- The turbine torque is determined by force measurement on a band brake and is read on spring balances.
- For measuring the rotational speed, a non-contact speed sensor.
- A manometer shows the water pressure at the turbine inlet.
- Water turbines are turbo machines utilizing waterpower.
- The water is fed in the control device by means of a spiral housing.
- The Francis turbine is part of the reaction turbines, which convert the pressure energy of the water into kinetic energy in the control device and in the impeller.
- The flowing water is accelerated in the control device by the adjustable guide vanes and directed onto the vanes of the impeller.
- The redirection and further acceleration of the water in the impeller generates an impulse, which is transmitted to the Francis wheel.

Specification:

- **Output:** 350W at 1500min⁻¹, 270L/min, H=15m (approx.)
- **Max. Speed:** 3000min⁻¹
- Rotor, 11 blades, 7 vanes
- **Medium diameter:** 60mm
- **Angle of attack:** 0...20°

Measuring ranges:

- **Torque:** 0...9,81Nm
- **Pressure:** 0...4bar abs.
- **Speed:** 0...4000min
- **Dimension:** 1000-x800 x 1200 mm
- **Weight:** 90kg

Contact Science Lab for your Educational School Science Lab Equipments. We are best technical educational equipments manufacturers, technical educational equipments manufacturer, technical educational equipments supplier, technical educational instruments, technical educational instruments exporter, technical educational instruments manufacturer, vocational training lab instruments exporter.
