

Product Name :

Computerized Emissivity Measurement
Apparatus

Product Code :

SLE/MCE/71

Description :

Description:

- Computerized Emissivity Measurement Apparatus offers basic experiments for targeted teaching on the topic of heat transfer by radiation.
- The reflector concentrates the radiation to a focal point.
- A sample is placed on a thermocouple located at the focal point.
- The thermal radiation emitted by the sample is measured by a thermopile.
- At the heart of the experimental unit is a metallic sample heated by a concentrated light beam.
- The light beam is generated by a continuously adjustable halogen lamp and a parabolic reflector.
- In order to be able to measure the radiation at different distances, the thermopile is mounted on a moveable carriage.
- Heat radiation is one of the three basic forms of heat transfer.
- In radiation the heat transfer takes place via electromagnetic waves.
- Unlike heat conduction and convection, heat radiation can also propagate in a vacuum. Heat radiation is not bound to
