

**Product Name :**

Coupled Tanks Apparatus

**Product Code :**

SLE/ETC/02

**Description :**

- The Coupled Tanks Apparatus investigates basic and advanced control engineering principles.
- This includes the study of static and dynamic systems.
- It is also an ideal system to use with other control strategies such as fuzzy logic.
- Shows fluid transport and liquid level control problems in process control.
- A rotameter-type flow meter shows the flow rate.
- An electronic flow meter measures the flow rate.
- A scale on each tank allows students to check the level-sensor calibration.
- Variable-speed pump forces water into the left-hand tank.
- A valve connects this tank to a second tank, if needed, for two-tank experiments.
- Each tank has a level sensor that gives output signals proportional to the water level in each tank.
- The basic control problem is to regulate the liquid level in one of the tanks by varying the speed of the circulating pump.

Contact Science Lab for your Educational School Science Lab Equipments. We are best educational lab equipments manufactruers, educational lab instruments manufacturer, educational laboratory glassware exporter, educational laboratory microscopes, educational laboratory suppliers, educational scienitific lab equipments.
