

Product Name :

Spectroscope (for high school)

Product Code :

SCL255/042

**Description :**

A compact instrument containing all the optical accessories for conducting the Newton's Ring experiment, our microscope is specifically designed for laboratory use.

With top grade optics and precise machining, our Newton's Ring Microscope is ideal for determining wavelength of sodium light by measuring Newton's ring diameter.

Consist of a table with a three-edged prism, a collimator tube with a lens and a slit

A telescope with a lens and a moving eyepiece, a micrometer screw, a stand for installing the device on a support.
