Product Name :

Apparatus for Studying the Dependence of Electrical Resistance on the Factors that Determine it

Product Code :

SCL-361/020

Description :

DESCRIPTION :-

- Apparatus for studying the dependence of electrical resistance consists of a device to supply the source of electric current 2-14 V AC / DC 6A, a digital ammeter, a digital voltmeter, 2 pairs of conducting wires, 24 SWG, 2 pairs of conducting wires, 30 SWG, 2 pairs of guide wires with copper wire material 30 SWG, 2 pairs of guide wires with iron material 30 SWG, 2 pairs of guide wires with 4 mm cutting surface and 100cm length in red and black, 2 pairs guide threads with a cutting surface of 4 mm and a length of 50 cm in red and black colors.
