

**Product Name :**

Apparatus for Newton's Cooling Law

**Product Code :**

SCL-333/065

**Description :****DESCRIPTION :-**

- Newton's Law of Cooling explains heat transfer between two different bodies.
- This concept forms the basis of thermodynamics, hence understanding this concept is critical.
- This apparatus goes a long way in accomplishing that as it is simple to use and accurate in its performance.
- Consist of two copper calorimeters resting inside a trough which stand in an outer tank
- The latter is fitted with a wooden top with two holes for thermometer.
